Specifying Tool model

SH ○○○○ - CAT E.g.: SH450-CAT

Model indicating Superroll MAC Type.

Tool model No. = Hole size x 100

SH: For through hole / SB: For blind hole

Non-burnishing length

SH-MAC (For through hole)

Hole size (mm)	Non-burnishing length (mm)
4.5 - 7.6	2.1 + α

SB-MAC (For blind hole)

Roller	Hole size (mm)	Non-burnishing length (mm)
Standard	8 - 14.5	1.5 + β
R0.3	15 - 44	1.8 + β
R0.3	All sizes	0.8 + β

α = Tool diameter range of hole size to track [Max. 0.2 mm] x 16 - 1 mm
 * If α is a negative value, then $\alpha = 0$.

β = Tool diameter range of hole size to track [Max. 0.2 mm] x 16

E.g.: If dimensional tolerance before Superroll burnishing is ± 0.1
 → Tool diameter range to track = 0.2 mm
 Therefore, $\alpha = 0.2 \text{ mm} \times 16 - 1 = 2.2 \text{ mm}$

Hole size $\phi 15 - \phi 24$

How to use Superroll MAC

- Set a tool diameter approximately 0.05 mm bigger than an expected maximum hole size.
- Set the Pre-load.
- Conduct a trial burnishing and adjust the optimum load while checking the finished condition.

Burnishing conditions (Reference)

Hole size (mm)	Rotation speed (min ⁻¹)	Feed rate (mm/rev)	Pre-load	
			Steel	Aluminum
(N)				
4.5 - 7.6	900 - 1,800	0.1 - 0.3	10 - 60	3 - 30
8 - 14.5	800 - 1,200	0.1 - 0.4	20 - 85	4 - 40
15 - 19	700 - 1,000	0.2 - 0.5	35 - 210	7 - 70
20 - 24	600 - 800	0.3 - 0.6	60 - 360	12 - 120
25 - 34	500 - 700	0.3 - 1.0	80 - 480	16 - 160
35 - 44	400 - 600	0.3 - 1.0	90 - 540	20 - 200

* Burnishing conditions are reference only, and do not guarantee that they will achieve the customers' required values.
 * Actual burnishing conditions vary depending on the material and conditions before burnishing, so these values should be used as a reference.

About the tool weight (Reference only)

Tool model	Weight (kg)
SH(SB)450 - 1450-CAT	350 - 600
SH(SB)1500 - 2400-CAT	700 - 800
SH(SB)2500 - 3400-CAT	850 - 1,000
SH(SB)3500 - 4400-CAT	1,050 - 1,250

- *Please check the allowable tool weight for your driving machine before using the tool.
- *Please contact us if a specific tool weight is required.

About cutting mandrel tip

If the mandrel protruded length from the roller tip interferes with the bottom surface of the workpiece, cut the protruded length of the mandrel by grinding for following procedure or other means before using.

[Procedure]

- Set the required tool diameter.
- Measure the length from the roller tip to the mandrel tip with using a vernier caliper.
- Disassemble the mandrel from the main unit.
- Cut off the mandrel tip section, leaving β section from the roller tip indicated in the image on the right.
- After cutting the tip, remove burrs from the cut section and assemble the mandrel to the main unit.

β = Tool diameter range to track (Max. 0.2 mm) x 16

[Precautions]

- Take care not to grind too much away when cutting the mandrel tip.
- The mandrel has been heat treated. To prevent a reduction in hardness due to generated heat, cut the mandrel tip while maintaining cooling.
- The mandrel is a heat treated part, so cut the tip by grinding it.
